

# **Update on ATC Method 1 at QARC**

ATC 1/19/06

## **ATC Method 1 at QARC**

Remote Review Tool is running on a Linux server at QARC and functioning as a local web application. The system is now fully functional, including data acquisition via ftp to QARC (with secure user accounts).

# Current Protocols Supporting Digital RT Submission

COG ACNS0121	Phase II Trial of Conformal Radiotherapy For Children With Localized Ependymoma
COG ACNS0126 (closed 9/6/2005)	Phase II Study of Temozolomide For Children With High Grade Glioma
COG ACNS0331	Newly Diagnosed Standard Risk Medulloblastoma

## **Protocols to be Added**

- **CALGB 80101**

Phase III Intergroup Trial of Adjuvant  
Chemoradiation After Resection of Gastric or  
Gastroesophageal Adenocarcinoma

- **Also considering COG ARST0531**

Intermediate Risk Rhabdomyosarcoma

## Current Accrual

<b>Protocol</b>	<b>Number of Cases</b>
ACNS0121	5
ACNS0126	5
ACNS0331	11
8002	3
Total of 24 cases from 13 institutions	

**How to increase rate of accrual?**

- Fax reminders of data to be submitted now encourage all institutions participating in these selected studies to submit RT data digitally.
- Amendments are being prepared for ACNS0121 and ACNS0331, and statements encouraging submission of digital RT data will be included in the protocol guidelines.
- We may also include a standard comment encouraging digital RT submission in on-treatment letters for cases on the designated studies.
