

Report on
WUSTL/Bioinformatics-supported
ATC activities

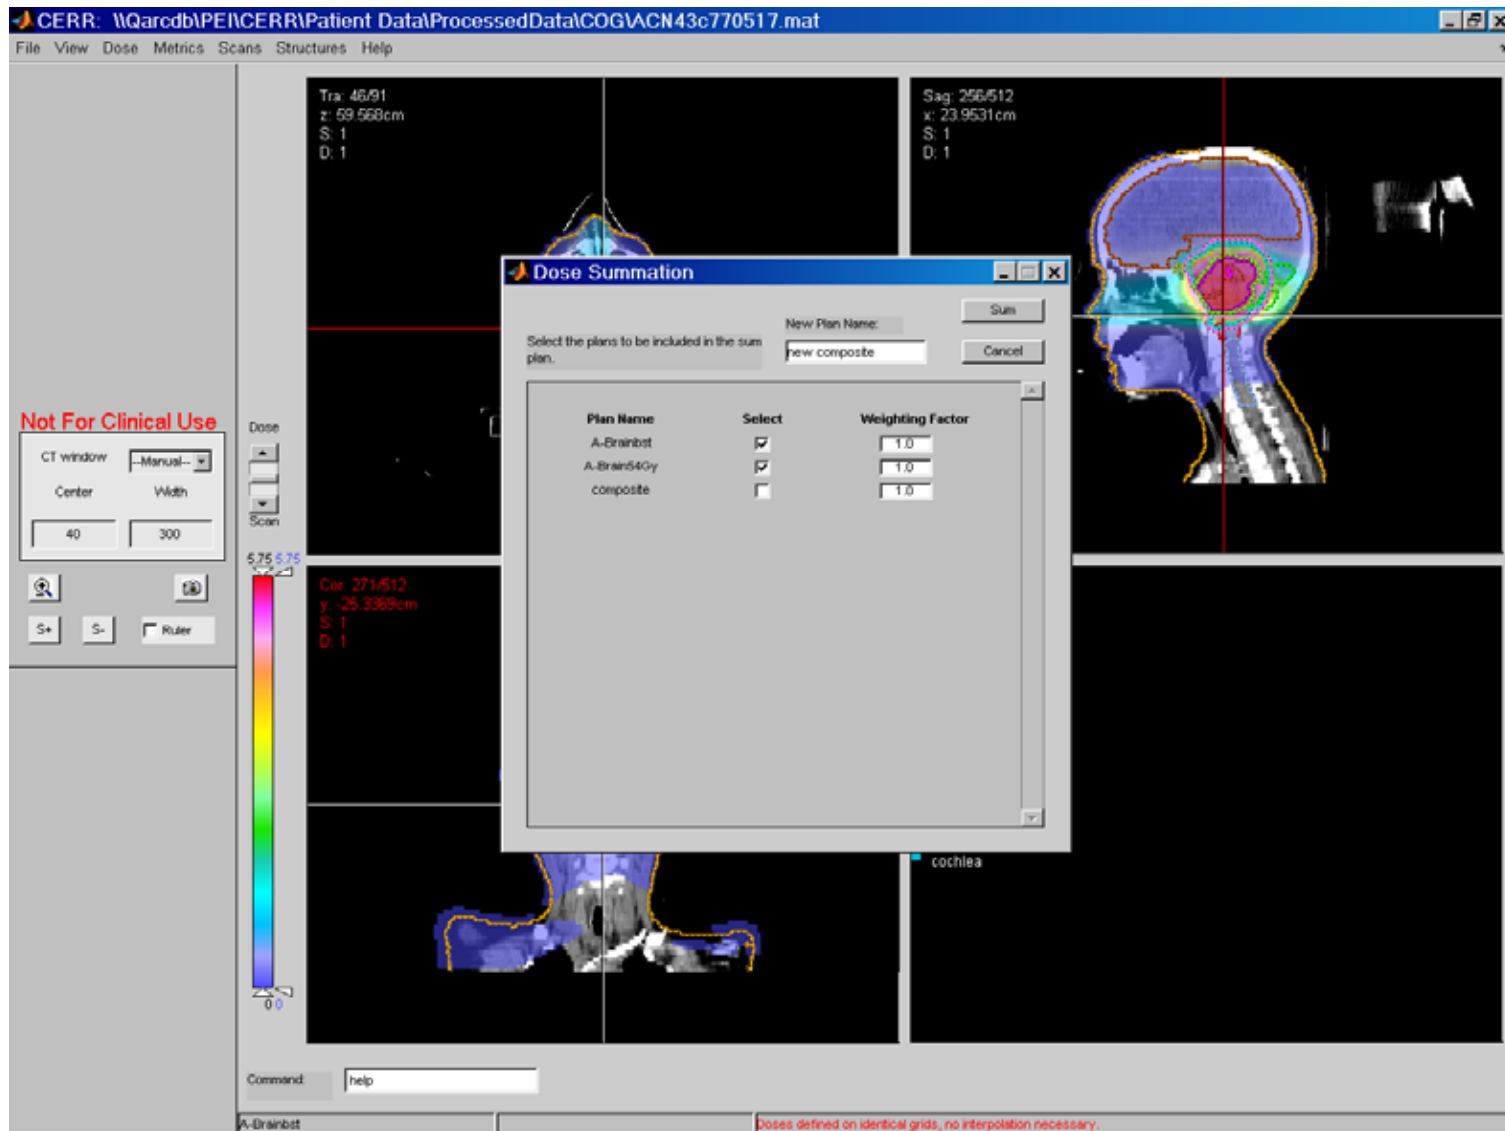

Joe Deasy, PhD

Programmers (0.5 FTE spread among)

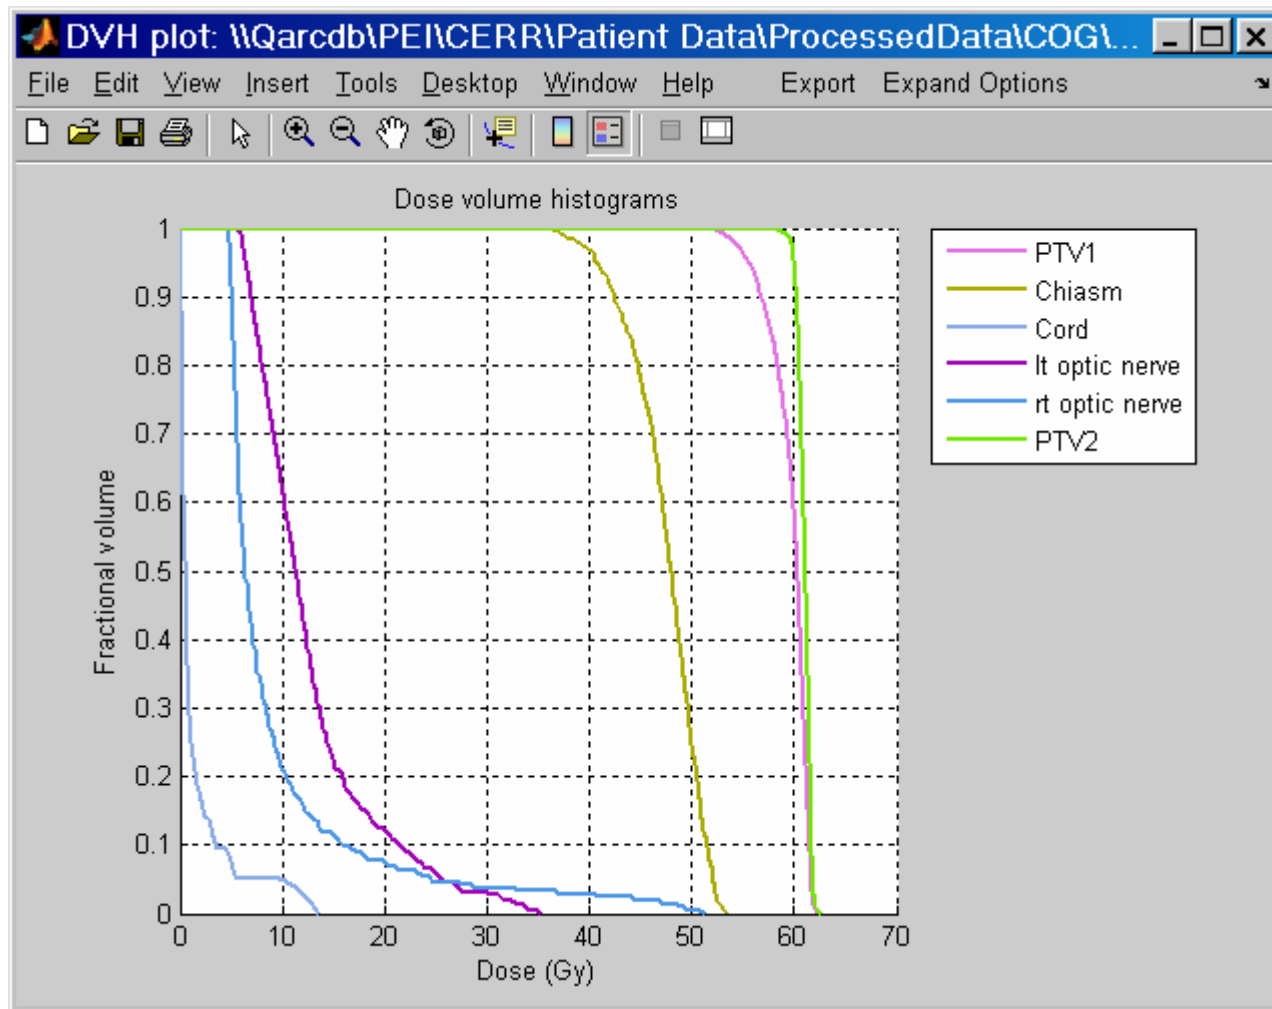

- Divya Khullar, MS
- Aditya Apte, MS
- Yu Wu, MS

Short term goals [1/2]

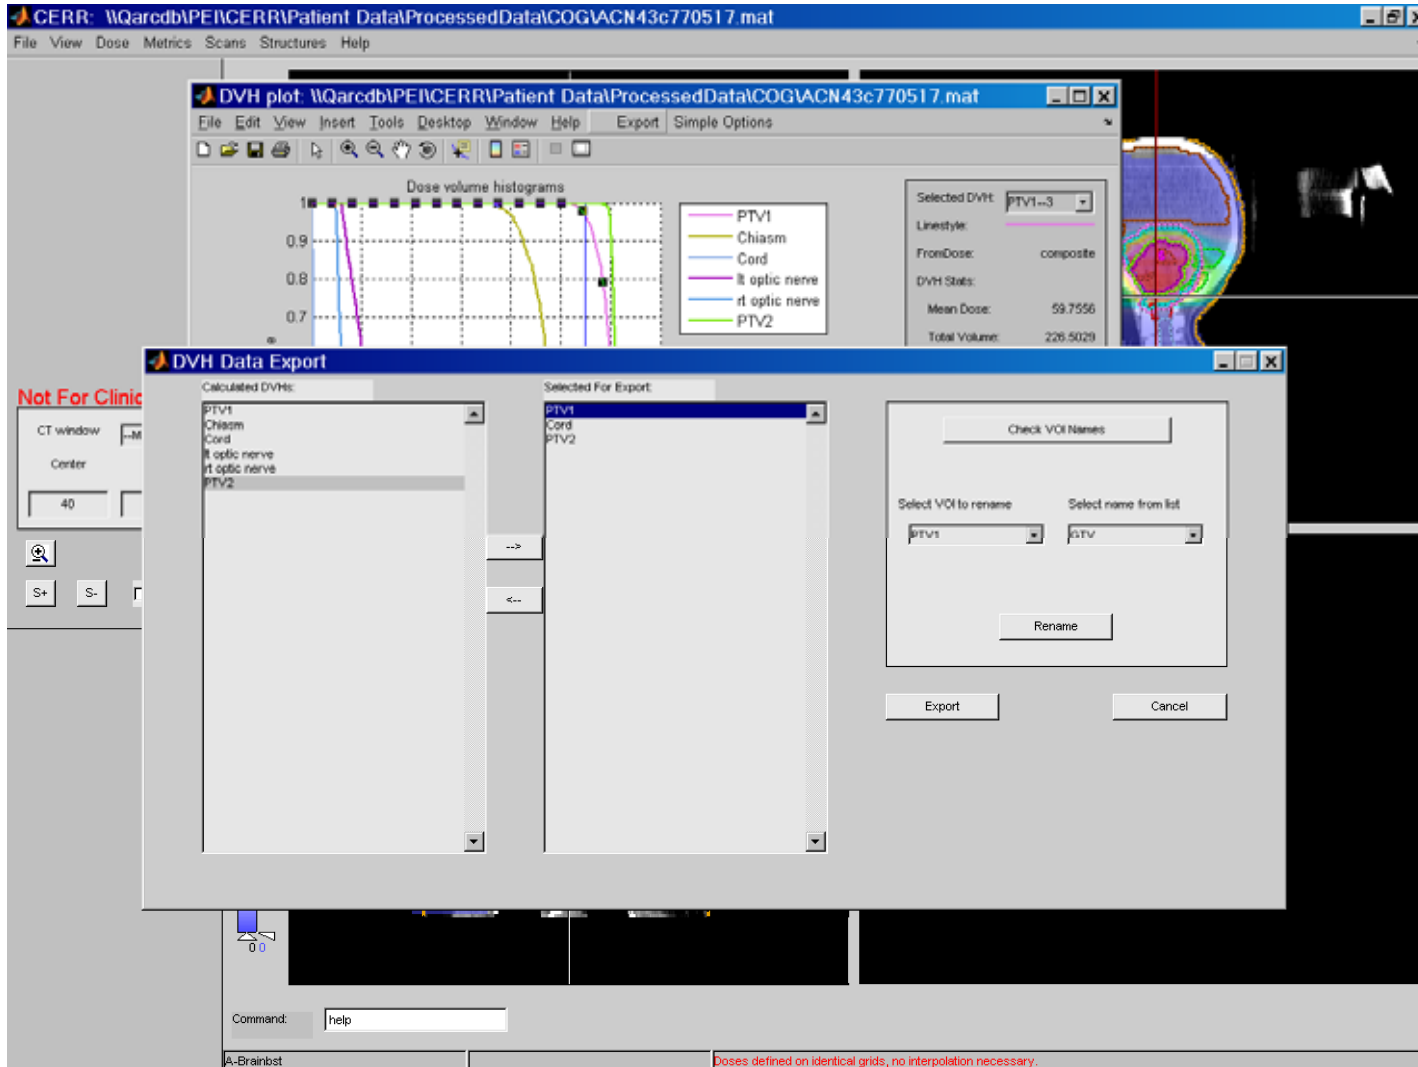

- Support QARC use of CERR
 - Migrate Ken Ulin's changes/improvements to our newest version
 - Speed up importing
- Support ITC use of CERR
 - Compiled versions
 - CERR as universal import tool
 - Improved batch conversion with graphical review

Plan data printed on: 01/16/2008 3:58:13 PM
 =====
 Institution: unknown
 Study Created on: 20070523
 =====
 Patient Name:
 Current Treatment Plan ID: 1
 Fraction Group ID: A-Brainbst
 =====
 This plan has 8 fields.
 =====
 Beam Number: 8
 Beam Description: APSETUP
 Beam Modality: PHOTON
 Beam Energy Mev: 6
 Beam Type: STATIC
 Nominal isocenter distance: 1000
 Collimator Type:
 "Isocenter coordinate"
 "Collimator Setting X" -75, 75
 "Collimator Setting Y" -75, 75
 Collimator Angle: 0
 Couch Angle: 0
 Gantry Angle: 0
 Head IN/OUT: HFS
 Aperture Type:
 Wedge Angle: 0
 Wedge Rotation Angle:
 Rx Dose Per Tx(Gy):
 Number of Tx: 3
 =====
 Beam Number: 7
 Beam Description: RL SETUP
 Beam Modality: PHOTON
 Beam Energy Mev: 6
 Beam Type: STATIC
 Nominal isocenter distance: 1000
 Collimator Type:
 "Isocenter coordinate"
 "Collimator Setting X" -75, 75
 "Collimator Setting Y" -75, 75
 Collimator Angle: 0
 Couch Angle: 0
 Gantry Angle: 270
 Head IN/OUT: HFS
 Aperture Type:
 Wedge Angle: 0
 Wedge Rotation Angle:
 Rx Dose Per Tx(Gy):
 Number of Tx: 3
 =====
 Beam Number: 4
 Beam Description: A10-PA
 Beam Modality: PHOTON
 Beam Energy Mev: 6
 Beam Type: DYNAMIC
 Nominal isocenter distance: 1000
 Collimator Type:
 "Isocenter coordinate"
 "Collimator Setting X" -43, 35
 "Collimator Setting Y" -35, 30
 Collimator Angle: 90
 Couch Angle: 0
 Gantry Angle: 180

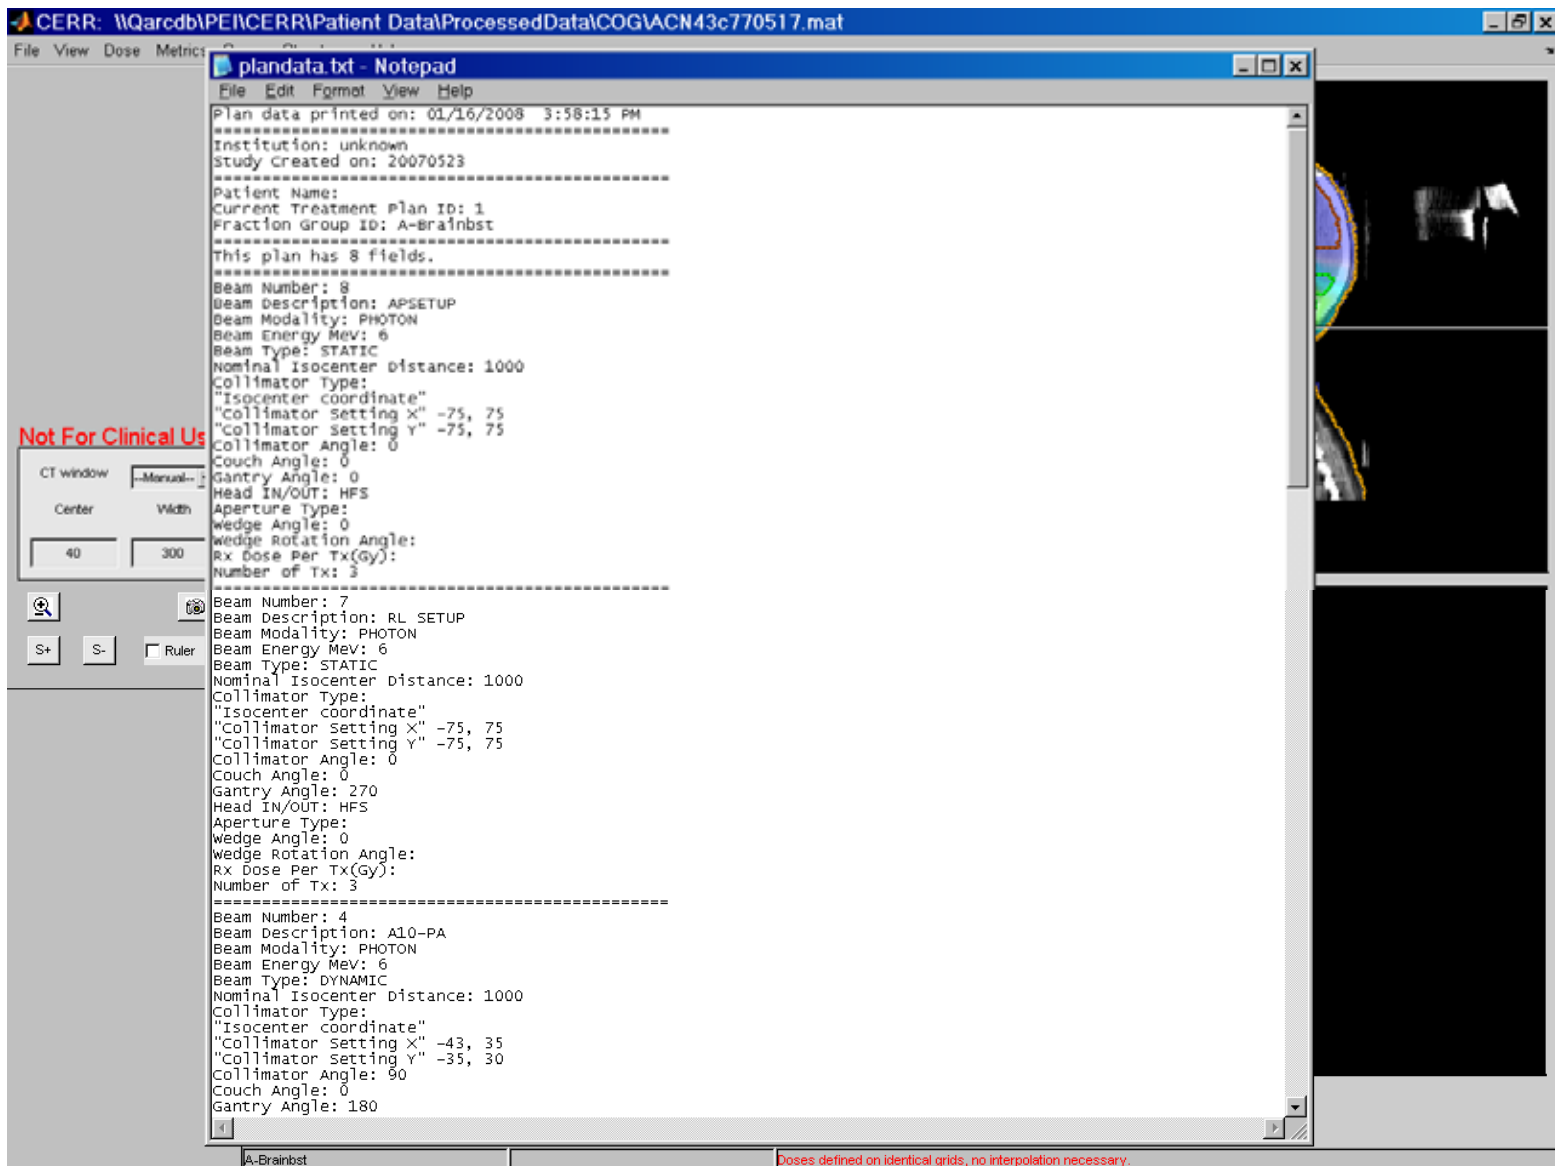

Not For Clinical Use

Short term goals [2/2]

- Plan metric summary on batch conversion
- Selected graphical views of plans on batch conversion
- Support for RTOG protocols
 - Cervical Ca 0418: image registration and review of structures on ‘bladder empty’ and ‘bladder full’ scans
 - Use of registration
 - Test PTV coverage metrics for structures derived from ‘new’ (post-planning) scans.
 - Support collaborative use of CERR over Webex
 - Option to copy structure from one scan to another

CERR: C:\work\0418c0026_merged.mat.bz2

Loaded 0418c0026_merged.mat.bz2. Ready.

An option to overlay a scan in contouring mode

Select the scan to overlay here

Medium term goals (< 1 yr)

- Automated reporting
 - DVH metrics: D98, D95, etc. in report form
 - Graphical images associated with batch for easy QA review (eventual use for protocol reviews?)
- Automated graphical snapshots of plan quality
- Support CERR as a component of Ca-GRID delivery of plan review services
 - Push architecture so plans are available on a physicians laptop/office machine when they can review them
- Basic image-registration QA tools

WASHINGTON UNIVERSITY IMRT DOSE QA TABLE

Head and Neck Target Volume Goals for Protocol 06-0001

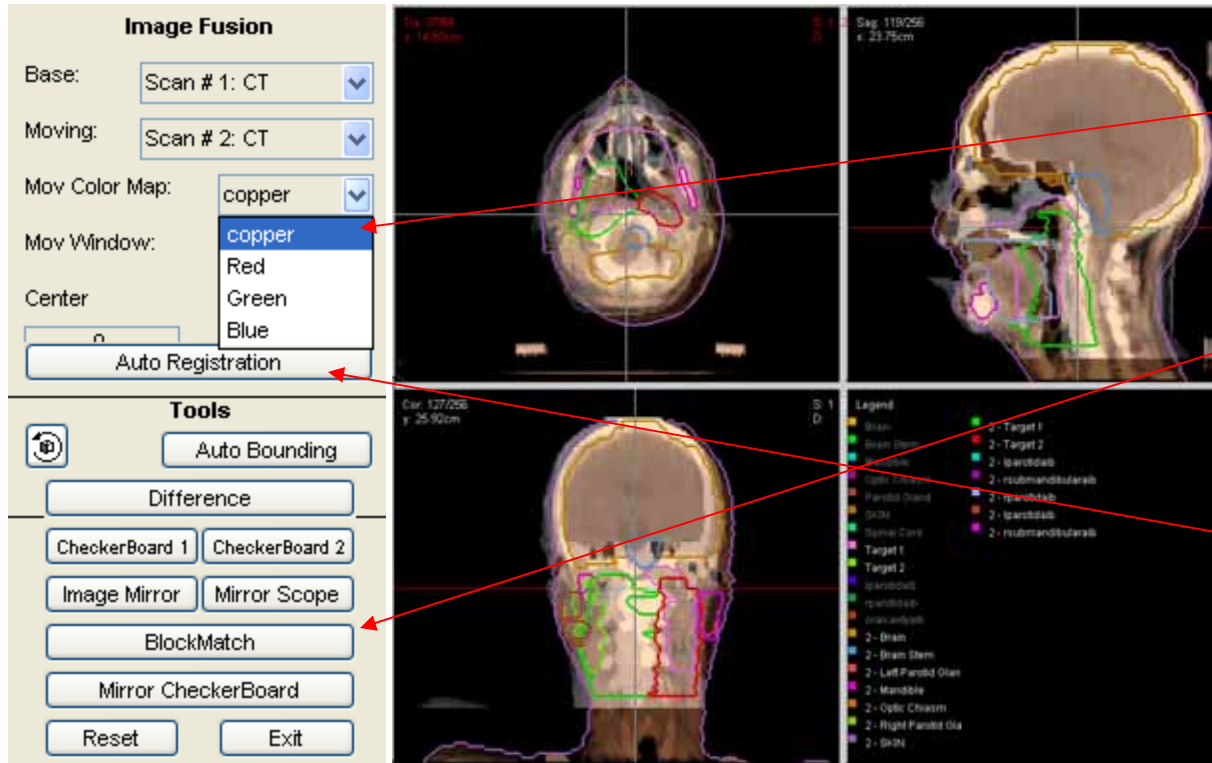

ROI	Vol (cc)	Goal	Meet Goal							
PTV Coverage Goals										
PTV 66	46	99% Vol > 93% Rx (65.1 Gy)	Yes	93% Rx=	99.50%	6243 Gy	PTV 66	Mean Dose	67	
		20% Vol ≤ 110% Rx (77 Gy)	Yes	% Vol ≥ 102% Rx=	5%	6937 Gy		Max Dose	74	
				% Vol ≥ 110% Rx=	1%	7260 Gy		Min Dose	43	
				% Vol ≥ 120% Rx=	0%	N/A Gy				
PTV 63	75	99% Vol > 93% Rx (63 Gy)	Yes	99% Vol=	99.2% Rx	6249 Gy	PTV 63	Mean Dose	64	
		20% Vol ≤ 110% Rx (63 Gy)	Yes	20% Vol=	32.4% Rx	6526 Gy		Max Dose	67	
				10% Vol=	12.5% Rx	6728 Gy		Min Dose	39	
				2% Vol=	6.5% Rx	7234 Gy				
PTV 56	104	99% Vol > 93% Rx (56 Gy)	Yes	99% Vol=	99.9% Rx	6229 Gy	PTV 56	Mean Dose	56	
		20% Vol ≤ 110% Rx (56 Gy)	Yes	20% Vol=	34.5% Rx	6500 Gy		Max Dose	66	
				10% Vol=	13% Rx	6721 Gy		Min Dose	39	
				2% Vol=	4.5% Rx	7002 Gy				

Critical Structure Constraints

Cord	0.1 cc Vol ≤ 45 Gy	Yes	0.1 cc = 3700 cGy Max = 3894 cGy
Brainstem	0.1 cc Vol ≤ 60 Gy 1% ≤ 60 Gy	Yes	0.1 cc = 5834 cGy Max = 5994 cGy
Brain	1% ≤ 60 Gy	No	60 Gy Volume = 1.50% 5 cc Max = 6137 cGy
	5 cc ≤ 65 Gy	Yes	
Optic Chiasm	0.1 cc Vol ≤ 60 Gy	Yes	0.1 cc = 210 cGy Max = 253 cGy
	1% ≤ 60 Gy	Yes	
Left Optic Nerve	0.1 cc Vol ≤ 60 Gy	Yes	0.1 cc = 154 cGy Max = 198 cGy
	1% ≤ 60 Gy	Yes	
Right Optic Nerve	0.1 cc Vol ≤ 60 Gy	Yes	0.1 cc = 128 cGy Max = 190 cGy
	1% ≤ 60 Gy	Yes	

(Khullar, Mullen, Apte, Clark et al.)

Upgrades to Image Registration tool

- Option to select different types of colormaps for moving images
- Comparison options like Mirror-Scope, BlockMatch, Mirror Checkerboard.
- Using ITK/VTK for auto-resigtration
- Display of Mutual-Information metric for manual registration to guide user in right direction.

Longer-term goals (within 2 yrs)

- CERR version that works seamlessly with IGRT datasets and deformable image registration (proper 'Context, Storage, Linkage')
- QA tools for deformable image registration
- MRI and PET in the same review process.
- Capability to handle 4D tools?
- Tools for data-mining of ITC data & data-analysis

RPC subcontract

- Continue to support QA tool that integrates with 3D treatment planning system.
- Continue to develop and support Monte Carlo tool that can be used to accurately recompute dose distributions given DICOM plan information.
 - Note the MC tool will ultimately integrate with the QA tool

Reminder

- RTOG Bioinformatics Committee
 - Overall informatics flow within RTOG
